150 SUNREEF POWER CONCEPT

When it comes to space, nothing can match a supercat

Sunreef's 150 Power Catamaran has a beam of 13.5-meters. Width wise, that's enough girth to place the 46-meter concept in the top 50 of the world's largest superyachts. Living space comes in at an equally impressive 980m², with the flybridge alone covering 95m². An evolution of the 115 Sunreef Power introduced in 2014, the 150 offers her guests luxury living, housed in a sporty,

stable and safe catamaran. The main deck can feature an open saloon with dining and lounging area with retractable terraces on both sides. The upper deck is the perfect place for a master suite with a breathtaking 360 degree view, giving plenty of natural light and direct access to the upper cockpit. Powered by two 2600hp MTU turbodiesels, the 150 can cruise at 17 knots all day long, with 4500 nautical miles possible at a leisurely 12 knots.
